1130	Cauc.	A Pos	Blue	Fr/Med	LtBr/Bln/Wav	6'3"	187	Medium	Ger/Norweg/Dan	BA Soc/Crimln
1131	Cauc.	O Pos	Blue	Fr/Med	Brown/Str	5'9"	128	Small	Germ/Scot/Fren	Accountant

All donors listed have demonstrated negative serology and/or virology for VDRL, Hepatitis antigen (HBsAg), Hepatitis core antibody (Anti-HBC), Cytomegalovirus, Mycoplasma hominis/Ureaplasma urealyticum, Chlamydia trachomatis, Herpes Simplex Virus and antibody to HIV-1 and HIV-2. It is our policy, in keeping with the American Association of Tissue Bank Standards, to maintain a 6 month quarantining period for donor specimens in order to re-evaluate each donor for the HIV-1 and HIV-2 antibody as well as HBsAg and Anti-HBC. These donor screens are completed every 30 days. Each donor specimen is examined for Neisseria gonorrhoea and negative cultures are obtained prior to shipment. Donor chromosome analysis, performed on peripheral blood is available upon physician request. CLI routinely maintains an inventory which is normally sufficient to meet most requests. We cannot however guarantee the immediate availability of semen specimens from each donor. To request donor semen, FAX or call CLI with the desired donor I.D. number, alternate donor choices, patient identification and number of insemination units needed.
